Lampiran 1. Motor Assessment Scale For Stroke

MOTOR ASSESSMENT SCALE FOR STROKE

| | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
|---|---|---|---|---|---|---|---|
| 1. Terlentang lalu berbaring ke samping lalu ke sisi yang intak | | | | | | | |
| 2. Terlentang lalu duduk ke samping tempat tidur | | | | | | | |
| 3. Duduk dengan seimbang | | | | | | | |
| 4. Duduk ke Berdiri | | | | | | | |
| 5. Berjalan | | | | | | | |
| 6. Fungsi Lengan Atas | | | | | | | |
| 7. Pergerakan Tangan | | | | | | | |
| 8. Aktivitas Tangan Lanjutan | | | | | | | |

A. Terlentang lalu berbaring ke samping lalu ke sisi yang intak

1. Tarik diri ke posisi berbaring di satu sisi. (Posisi awal harus berbaring terlentang, tungkai bawah dalam posisi ekstensi. Pasien menarik dirinya ke posisi berbaring di satu sisi dengan lengan yang intak, pindahkan tungkai dengan tungkai yang intak.
2. Pindahkan tungkai menyilang tubuh secara aktif lalu diikuti tubuh bagian bawah. Posisi awal sama seperti diatas. Lengan dibiarkan pada posisi awal.
3. Lengan diangkat menyilang tubuh dengan lengan lainnya. Tungkai digerakkan secara aktif dan diikuti oleh tubuh. (Posisi awal seperti diatas.)

4. Pindahkan lengan menyilang tubuh secara aktif lalu diikuti oleh tubuh. (Posisi awal seperti diatas.)
5. Gerakkan lengan dan tungkai, lalu gulingkan ke samping namun jangan sampai kehilangan keseimbangan. (Posisi awal seperti di atas. Bahu protraksi dan lengan difleksikan ke depan.)
6. Gulingkan ke samping selama 3 detik. (Posisi awal seperti diatas. Tidak boleh menggunakan tangan.)

B. Terlentang lalu duduk ke samping tempat tidur

1. Berbaring pada satu sisi, angkat kepala ke samping, namun tidak sampai duduk. (Pasien dibantu untuk barbing pada satu sisi)
2. Berbaring pada satu sisi, lalu duduk ke samping tempat tidur. (Terapis asistensi pasien dengan gerakan. Pasien harus kontrol posisi kepala seluruhnya.)
3. Berbaring pada satu sisi, lalu duduk ke samping tempat tidur. (Terapis siap memberikan bantuan [lihat Aturan Umum nomor 5] dengan cara asistensi kaki pasien ke samping tempat tidur.)
4. Berbaring pada satu sisi, lalu duduk ke samping tempat tidur. (Tanpa bantuan.)
5. Terlentang lalu duduk ke samping tempat tidur. (Tanpa bantuan.)
6. Terlentang lalu duduk ke samping tempat tidur dalam 10 detik. (Tanpa bantuan.)

C. Duduk dengan seimbang

1. Duduk hanya dengan bantuan. (Terapis asistensi pasien untuk duduk.)

2. Duduk tanpa bantuan selama 10 detik. (Tanpa berpegangan, lutut dan kaki bergerak secara bersamaan, kaki dapat disangga di lantai.)
3. Duduk tanpa bantuan dengan berat ke depan dan terdistribusi merata. (Berat harus ke depan dengan panggul fleksi dan kepala dan tulang belakang bagian torakal ekstensi. Berat terdistribusi merata di kedua sisi tubuh.)
4. Duduk tanpa bantuan, putar kepala dan badan untuk melihat ke belakang. (Kedua kaki disangga di lantai. Tungkai bawah tidak boleh abduksi dan kaki tidak boleh bergerak. Tangan dalam keadaan istirahat di tungkai atas, tangan tidak boleh bergerak. Berputar ke setiap sisi.)
5. Duduk tanpa bantuan, lakukan gerakan meraih ke depan untuk menyentuh lantai lalu kembali ke posisi awal. Kaki disangga di lantai. Pasien tidak boleh menahan tubuhnya. Tungkai bawah dan kaki tidak boleh bergerak. Sangga lengan bila perlu. Tangan harus menyentuh lantai setidaknya 10 cm (4 inchi) di depan kaki. Lakukan dengan setiap lengan.
6. Duduk pada kursi tanpa disangga. Lakukan gerakan meraih ke samping untuk menyentuh lantai, lalu kembali ke posisi awal. (Kaki disangga di lantai. Pasien tidak boleh untuk menahan tubuhnya. Tungkai bawah dan kaki tidak boleh bergerak. Sangga lengan bila perlu. Pasien harus melakukan gerakan meraih ke samping bukan ke depan. Lakukan pada kedua sisi.)

D. Duduk ke Berdiri

1. Berusaha untuk berdiri dengan bantuan terapis (dengan berbagai metode)

2. Berusaha untuk berdiri dengan menggunakan kekuatan sendiri (dengan menggunakan bantuan tangan)
3. Berusaha untuk berdiri(jangan menggunakan kekuatan badan ataupun bantuan tangan)
4. Berusaha untuk berdiri dan bertahan selama 5 detik dengan panggul dan lutut lurus / posisi tegap (jangan menggunakan kekuatan badan untuk menumpu)
5. Duduk – berdiri – duduk tanpa bantuan (jangan menggunakan kekuatan badan sebagai penumpu . Dengan sikap panggul dan lutut lurus / Tegap)
6. Duduk-berdiri-duduk dengan tanpa bantuan sebanyak 3 kali dalam 10 detik (jangan menggunakan kekuatan badan sebagai penumpu)

E. Berjalan

1. Berdiri dengan menggunakan kaki yang lumpuh dan melangkah menggunakan kaki lainnya (dengan menggunakan kekuatan penumpu pada panggul . Terapis stand by untuk membantu)
2. Berjalan dengan bantuan orang
3. Berjalan sejauh 3m (10 feet) sendiri atau menggunakan walker tanpa bantuan orang lain
4. Berjalan sejauh 5 meter (16 feet) tanpa bantuan apapun selama 15 detik
5. Berjalan sejauh 10 meter (33 feet) tanpa bantuan , mengambil benda dari lantai , kemudian berbalik dan berdiri kembali serta berjalan ke tempat asal selama 25 detik

6. Berjalan naik dan turun sebanyak 4 langkah dengan atau tanpa bantuan serta tanpa bersandar pada pegangan tangga sebanyak 3 kali selama 35 detik

F. Fungsi Lengan Atas

1. Supinasi, protraksi gelang bahu dengan lengan 90 derajat dari fleksi bahu. (Terapis memposisikan lengan dan menyangga siku dalam posisi ekstensi.)
2. Supinasi, tahan lengan pada 90 derajat dari fleksi bahu selama 2 detik. (Terapis memposisikan lengan dan pasien harus menjaga posisi tersebut dengan rotasi eksternal [45 derajat]. Siku ditahan setidaknya 20 derajat dari ekstensi penuh.)
3. Supinasi, tahan lengan 90 derajat dari fleksi bahu, fleksi dan ekstensikan siku untuk menggerakkan telapak tangan ke dahi. (Terapis asistensi supinasi dari lengan bawah.)
4. Posisi duduk, tahan lengan yang diekstensikan dengan posisi fleksi ke depan pada 90 derajat dari badan selama 2 detik. (Terapis memposisikan lengan dan pasien menjaga posisi tersebut. Pasien harus menahan lengan pada posisi mid rotasi [ibu jari menghadap ke atas]. Jangan biarkan elevasi bahu yang berlebihan.)
5. Posisi duduk, pasien mengangkat lengan ke atas, tahan selama 10 detik, lalu turunkan. (Pasien harus menjaga posisi tersebut dengan sedikit rotasi eksternal. Jangan biarkan adanya pronasi.)

6. Posisi berdiri, tangan ke tembok. Jaga posisi tangan saat tubuh menuju ke arah tembok. (Lengan dalam posisi abduksi 90 derajat dengan telapak tangan rata terhadap tembok.)

G. Pergerakan Tangan

1. Posisi duduk, ekstensi dari pergelangan tangan. (Pasien dalam posisi duduk dengan lengan bertumpu di meja. Terapis menempatkan *cylindrical object* (benda berbentuk silinder) pada telapak tangan pasien. Pasien diminta untuk mengangkat benda tersebut dari meja dengan cara mengekstensikan pergelangan tangannya. Jangan biarkan adanya fleksi dari siku.)
2. Posisi duduk, deviasi radius pergelangan tangan. (Terapis memposisikan lengan pasien mid pronasi supinasi, yakni, bertumpu pada sisi ulna, ibu jari sejajar dengan lengan bawah, dan pergelangan tangan dalam posisi ekstensi. Jari-jari menggenggam *cylindrical object* (benda berbentuk silinder). Pasien diminta untuk mengangkat tangannya dari meja. Jangan biarkan adanya fleksi ataupun pronasi dari siku.)
3. Posisi duduk, siku di samping, pronasi dan supinasi. (Siku tidak disangga dan pada sudut kanan. Jangkauan gerakan yang diperbolehkan sebesar tiga perempat.)
4. Posisi duduk, condong ke depan, ambil bola dengan diameter 14 cm (5 inchi) dengan kedua tangan, lalu letakkan ke bawah. (Bola harus diletakkan di meja pada jarak yang memerlukan ekstensi siku. Telapak tangan harus selalu menyentuh bola.)

5. Posisi duduk, ambil gelas *polystyrene* dari meja dan letakkan di sisi meja yang menyilang dengan tubuh. (Jangan sampai ada perubahan bentuk dari gelas.)
6. Posisi duduk, Oposisi ibu jari terhadap setiap jari secara terus menerus, lebih dari 14 kali selama 10 detik. (Mengetukkan ibu jari ke setiap jari secara bergantian, mulai dari jari telunjuk, Jangan sampai ibu jari bergeser dari satu jari ke jari lain atau terbalik arahnya.)

H. Aktivitas Tangan Lanjutan

1. Angkat bagian atas pulpen dan letakkan kembali. (Pasien meraih ke depan sepanjang lengan, angkat bagian atas pulpen, lepaskan kembali ke bagian meja yang dekat dengan tubuh pasien.)
2. Angkat satu *jellybean* dari sebuah gelas dan letakkan *jellybean* tersebut di gelas lain. (Cangkir teh berisikan 8 *jellybean*. Jarak kedua cangkir sepanjang lengan. Tangan kiri mengambil *jellybean* dari cangkir sebelah kanan dan melepaskannya pada cangkir sebelah kiri.)
3. Gambar garis-garis horizontal berhenti pada sebuah garis vertikal, sebanyak 10 kali, selama 20 detik. (Setidaknya 5 garis harus meyentuh dan berhenti pada garis vertikal. Panjang garis kurang lebih 10 cm.)
4. Pegang pulpen, buatlah titik-titik yang berurutan secara cepat pada selembar kertas. (Pasien harus membuat setidaknya 2 titik dalam setiap detik, selama 5 detik. Pasien mengambil pulpen dan memposisikannya tanpa asistensi. Pulpen dipengang seperti untuk menulis. Yang dibuat oleh pasien harus titik bukan garis.)

5. Ambil satu sendok berisi cairan ke mulut. (Kepala tidak boleh direndahkan ke arah sendok. Cairan tidak boleh tumpah.)
6. Genggam sebuah sisir dan sisir rambut dibelakang kepala. Bahu harus dalam posisi rotasi eksternal, dan abduksi setidaknya 90 derajat. Kepala harus tegak.

Lampiran 3. *Informed Consent*

Persetujuan Setelah Penjelasan (*INFORMED CONSENT*)

Yth Saudara :

Saudara akan diperiksa menggunakan pemeriksaan motor assessment scale for stroke untuk mengetahui hubungan antara faktor-faktor risiko stroke terhadap fungsi motorik. Dengan pemeriksaan ini saudara dapat mengetahui fungsi motorik saudara. Lama pemeriksaan motor assessment scale for stroke diperkirakan berkisar 5 hingga 15 menit. Mungkin nanti ada sedikit ketidak nyamanan disaat pemeriksaan karena saudara diharuskan melakukan pemeriksaan tanpa bantuan orang lain namun tetap dalam pengawasan. Peneliti menjamin kerahasiaan identitas dan informasi yang diberikan. Jika terjadi cedera yang diakibatkan oleh karena penelitian akan di berikan terapi secara cuma-cuma. Informasi tersebut hanya digunakan untuk kepentingan penelitian. Saudara berhak menolak dan keluar dari penelitian sesuai dengan keinginan.

Terima kasih atas kerjasama Saudara.

 Perihal : Permohonan ijin penelitian

02 APR 2014

Yth. Direktur Utama
 RSUP Dr. Kariadi
 Semarang

Dengan hormat,

Bersama ini kami hadapkan mahasiswa Program Studi Pendidikan Dokter Fakultas Kedokteran Universitas Diponegoro Semarang :

Nama : Bianda Axanditya
 NIM : 22010110130181
 Semester : VIII (delapan)

Mohon diijinkan melakukan penelitian di Bagian Neurologi dan Instalasi Rekam Medik RSUP Dr. Kariadi Semarang, dalam rangka penyusunan Karya Tulis Ilmiah mahasiswa. Terlampir proposal mahasiswa yang bersangkutan.

Judul/ Topik : Hubungan antara Faktor Risiko Stroke Non Hemoragik dengan Fungsi Motorik

Pembimbing : 1. dr. Endang Kustiowati, Sp.S(K), M.Si.Med
 2. dr. Dwi Lestari Partiningrum, Sp.PD

Atas perhatian dan kerjasamanya diucapkan terima kasih.

a.n Dekan
 Pembantu Dekan I,

 dr. Herman Kristanto, MS, Sp.OG(K)
 NIP. 196305051989031003

Tembusan :

1. Dekan (sebagai laporan)
2. Ketua Tim Karya Tulis Ilmiah
3. Kepala Bagian Diklit RSUP Dr. Kariadi Semarang
4. Kepala Instalasi Rekam Medik RSUP Dr. Kariadi Semarang
5. Pembimbing
6. Mahasiswa Yang Bersangkutan
